Fact Sheet

MyFairShare

Sufficiency - Not the best is just enough, but just enough is the best

Reducing carbon emissions is one of the most important goals to prevent the world from disastrous future consequences of climate change. The transport sector requires specific actions, as it proves most difficult to decarbonise and transport emissions are decreasing too slowly.

However, efforts to foster mobility behaviour change largely fail, as future national reduction goals are too unspecific for citizens to induce a sense of personal responsibility and engagement.

MyFairShare builds on studies exploring the applicability of sufficiency principles to change mobility habits, e.g. through individual mobility budgets. Transport emissions can be effectively reduced by limiting allowances for carbon-intensive transport modes, but would only be acceptable if the individual share of allowances is perceived as fair.

MyFairShare combines and expands relevant knowledge, data and models to construct a scheme for fair distribution of individual mobility budgets, and identifies effective policy strategies.

Main objectives

- To identify baseline conditions and perceptions regarding mobility budgets** through defining fairness in the mobility context, exploring baseline conditions (e.g., spatial structure, accessibility), and categorising needs of target groups.
- To design methods for allocating mobility budgets and assessing impacts** by combining existing knowledge, data and models with the identified constraints and requirements, including an estimation of potential rebound and spill-over effects.
- To test selected cases of potential mobility budget scenarios** using the methods to distribute mobility budgets and measure the consumption of allowances and impacts in Mobility Budget Living Labs to analyse effects and observe the dynamics of communities acting within budget limits.
- To provide guidance to launch mobility budgets in different settings** by condensing the findings and results into recommended guidance for adapting mobility budgets to different local framework conditions, cutting across national, regional and city level governance.

Project profile

Funding programme

JPI Urban Europe ERA-NET Cofund Urban Accessibility and Connectivity (ENUAC)

Project title

MyFairShare – Individual Mobility Budgets as a Foundation for Social and Ethical Carbon Reduction

Coordinator

- AIT Austrian Institute of Technology

Project partners

- German Aerospace Center
- Florian Lorenz, PR-Consultant
- Latvia University of Life Sciences and Technologies
- University of Latvia
- London School of Economics and Political Science
- Institute of Transport Economics
- University of Natural Resources and Life Sciences

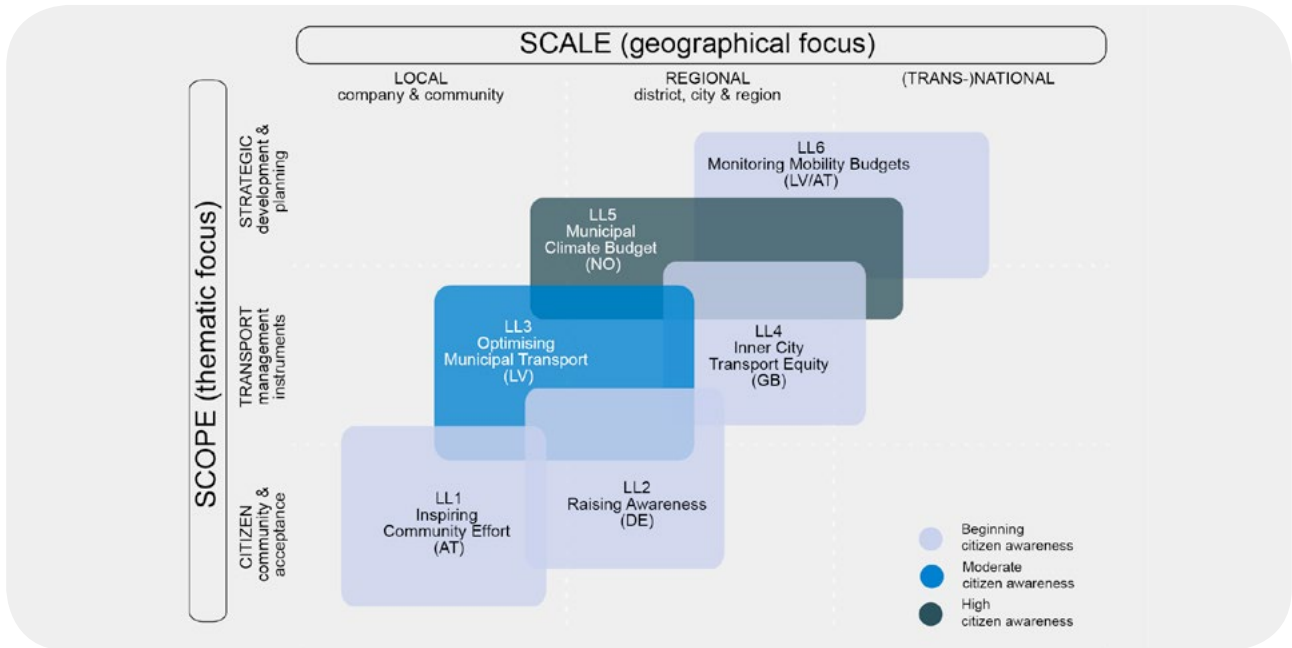

Project duration

05/2021 – 07/2024

Project funding

EUR 1.500.000

Six Living Labs across Europe

Main results

Accessible and comprehensible knowledge

The MyFairShare website provides easy to follow explanations about how sufficiency can help to reduce emissions and improve fairness.

Transparent standards and tools

MyFairShare developed a definition for group-specific Minimum Mobility Standards that can disclose what needs to be done for starting discussions about how this can be done.

Hands-on best practice

Experiences and Learnings from our Living Labs help developing processes for communicating sufficiency and motivating active engagement.

Recommendations and actionable guidance

Change can happen now! Fact Sheets and Tool Manuals provide orientation and practical advice for effectively applying the project results.

MyFairShare is a pan-European research project that builds on the sufficiency principles to change mobility habits through individual mobility budgets.
